

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Original): An optical recording material comprising an organic dye compound A whose absorption maximum wavelength (λ_{max}) is not less than 340 nm and not more than 440 nm and a metal-complex compound B whose absorption maximum wavelength (λ_{max}) is not less than 500 nm and not more than 900 nm, wherein the content of the organic dye compound A is higher than the content of the metal-complex compound B, and

a light resistance x calculated by the following formula is not less than 30%:

$$\text{Light resistance } x = \{(I_1/I_0) \times 100\}$$

(wherein, I_0 is the absorbance at the absorption maximum present in the wavelength range from 340 nm to 440 nm in the absorption spectrum of a film of a mixture of the organic dye compound A and the metal-complex compound B measured by a spectrophotometer; and I_1 is the absorbance at the absorption maximum present in the wavelength range from 340 nm to 440 nm in the absorption spectrum, measured by the spectrophotometer, of the film of the mixture of the organic dye compound A and the metal-complex compound B after light irradiation treatment).

Claim 2 (Original): The optical recording material according to claim 1, wherein, as for the organic dye compound A, the light resistance $x = \{(I_{A1}/I_{A0}) \times 100\}$ calculated with the absorbance (I_{A0}) of the absorption maximum present in the wavelength range from 340 nm to 440 nm in the absorption spectrum of the film measured by the spectrophotometer and the absorbance (I_{A1}) of the absorption maximum present in the wavelength range from 340 nm to 440 nm in the absorption spectrum of the film of the organic dye compound A measured after a light irradiation treatment is less than 30%.

Claim 3 (Previously Amended): The optical recording material according to claim 1
~~or 2~~, wherein the light resistance x is calculated by the following operation steps:
(Operation steps)

(Step 1) Spin-coating a transparent substrate with a solution containing the organic dye compound A and the metal-complex compound B, then drying to prepare a dye coated disc;

(Step 2) Measuring the absorption spectrum of the dye coated disc prepared in the (Step 1) at the wavelength of 300 nm to 900 nm with a spectrophotometer, and determining I_0 as the absorbance at the absorption maximum present in the wavelength range from 340 nm to 440 nm;

(Step 3) Subjecting the dye coated disc prepared in the (Step 1) to a light irradiation treatment of irradiating with a xenon lamp at 250 W/m^2 for 8 hours, then measuring the absorption spectrum under the same condition as in (Step 2), and determining I_1 as the absorbance at the absorption maximum present in the wavelength range from 340 nm to 440 nm; and

(Step 4) Calculating $\{(I_1/I_0) \times 100\}$ based on the (I_0) at the (Step 2) and the (I_1) at the (Step 3).

Claim 4 (Previously Amended): The optical recording material according to ~~any one of claims 1 to 3~~ Claim 1, wherein the content of the metal-complex compound B is not less than 20% by weight and not more than 40% by weight, assuming a total amount of the organic dye compound A and the metal-complex compound B as 100% by weight, when the absorption maximum wavelength (λ_{max}) of the metal-complex compound B is 500 nm to 620 nm.

Claim 5 (Previously Amended): The optical recording material according to ~~any one of claims 1 to 4~~ Claim 1, wherein the difference between the absorption maximum wavelength (λ_{max}) of the organic dye compound A and the absorption maximum wavelength (λ_{max}) of the metal-complex compound B is 100 nm or more.

Claim 6 (Previously Amended): The optical recording material according to claim 1 ~~or 5~~, wherein the absorption maximum wavelength (λ_{max}) of the metal-complex compound B is 680 nm to 900 nm.

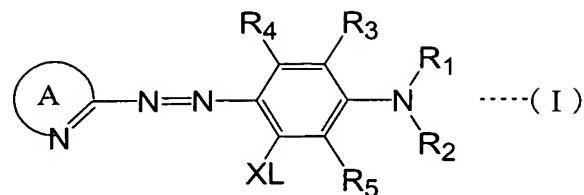

Claim 7 (Previously Amended): The optical recording material according to ~~any one of claims 1 to 6~~ Claim 1, wherein the light resistance x is 50% or more.

Claim 8 (Previously Amended): The optical recording material according to ~~any one of claims 1 to 7~~ Claim 1, wherein the organic dye compound A is at least one selected from the group consisting of a γ -pyrone organic dye, a γ -thiopyrone organic dye, a γ -1,1-dioxothiopyrone organic dye, a γ -pyridone organic dye, a coumalin organic dye, a carbostyryl organic dye and a 1-thiocoumarin organic dye.

Claim 9 (Previously Amended): The optical recording material according to Claim 1, wherein the metal-complex compound B is an azo metal-complex compound or an indoaniline metal-complex compound.

Claim 10 (Original): The optical recording material according to claim 9, wherein the metal-complex compound B is an azo metal-complex compound comprising a metal ion and an azo compound represented by the following general formula (I):

[Chem. 1]

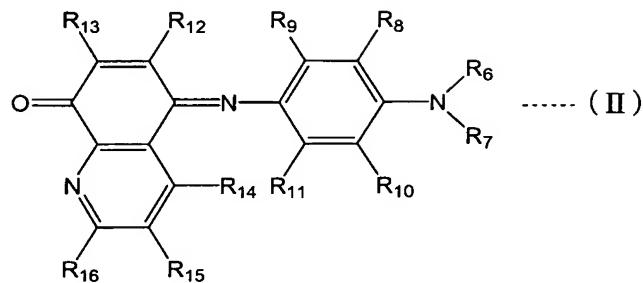

(In the formula (I), ring A is a nitrogen-containing heterocyclic aromatic ring formed with a carbon atom and a nitrogen atom, and XL represents a substituent in which X becomes an anion and capable of coordinating to a metal ion when L is eliminated; R₁ and R₂ each independently represent a hydrogen atom, a linear or branched alkyl group, a cyclic alkyl group, an aralkyl group or an alkenyl group, or each may form a condensed ring with an adjacent substituent group or with each other; R₃, R₄ and R₅ each independently represent a hydrogen atom, a linear or branched alkyl group having 1 to 12 carbon atoms, a cyclic alkyl group having 3 to 12 carbon atoms, a linear or branched alkenyl group having 2 to 12 carbon atoms, an aralkyl group having 7 to 18 carbon atoms, a linear or branched alkoxy group having 1 to 12 carbon atoms, a monocyclic saturated heterocyclic group, a halogen atom, a nitro group, a cyano group, a mercapto group, a hydroxy group, a formyl group, an acyl group represented by -COR₃₄, an amino group represented by -NR₃₅R₃₆, an acylamino group represented by -NHCOR₃₇, a carbamate group represented by -NHCOOR₃₈, a carboxylic acid ester group represented by -COOR₃₉, an acyloxy group represented by -OCOR₄₀, a carbamoyl group represented by -CONR₄₁R₄₂, a sulfonyl group represented by -SO₂R₄₃, a sulfinyl group represented by -SOR₄₄, a sulfamoyl group represented by -SO₂NR₄₅R₄₆, a sulfonic acid ester group represented by -SO₃R₄₇ or a sulfonamide group represented by -NHSO₂R₄₈ (wherein R₃₄, R₃₇, R₃₈, R₃₉, R₄₀, R₄₃, R₄₄, R₄₇ and R₄₈ each independently represent any of a hydrocarbon group or a heterocyclic group, and R₃₅, R₃₆, R₄₁, R₄₂, R₄₅ and R₄₆ each

independently represent any of a hydrogen atom, a hydrocarbon group or a heterocyclic group)).

Claim 11 (Original): The optical recording material according to claim 10, wherein, in the azo compound represented by the general formula (I), the ring A represents a 5- or 6-membered monocyclic or bicyclic fused nitrogen-containing heterocyclic aromatic ring, XL represents a hydroxy group, a sulfonate group, acylamino group, sulfonamide group, mercapto group, a carboxyl group, R₁ and R₂ each independently represent a linear or branched alkyl group having 1 to 12 carbon atoms, a cyclic alkyl group having 3 to 12 carbon atoms, an aralkyl group having 7 to 12 carbon atoms, or each may form a saturated condensed ring with an adjacent substituent group or with each other, R₃, R₄ and R₅ each independently represent a hydrogen atom, a linear or branched alkyl group having 1 to 8 carbon atoms, an aralkyl group having 7 to 12 carbon atoms, a linear or branched alkoxy group having 1 to 8 carbon atoms, a linear or branched alkylthio group having 1 to 8 carbon atoms, a monocyclic 5- or 6-membered-ring saturated heterocyclic group, a halogen atom, a nitro group, a cyano group, a mercapto group, a hydroxy group, an acyl group represented by -COR₃₄, an amino group represented by -NR₃₅R₃₆, an acylamino group represented by -NHCOR₃₇, a carbamate group represented by -NHCOOR₃₈, a carboxylic acid ester group represented by -COOR₃₉, an acyloxy group represented by -OCOR₄₀, a carbamoyl group represented by -CONR₄₁R₄₂, a sulfonyl group represented by -SO₂R₄₃, a sulfamoyl group represented by -SO₂NR₄₅R₄₆, a sulfonamide group represented by -NHSO₂R₄₈.

Claim 12 (Previously Amended): The optical recording material according to claim 9, wherein the metal-complex compound B is a metal-complex compound comprising a metal ion and an arbitrary anion and a compound represented by the following general formula (II).

[Chem. 2]

(In in the formula (II), R₆ and R₇ each independently represent a hydrogen atom, a linear or branched alkyl group, a cyclic alkyl group, an aralkyl group, an alkenyl group, or each may form a condensed ring with an adjacent substituent group or with each other; R₈ to R₁₆ each independently represent a hydrogen atom, a linear or branched alkyl group having 1 to 12 carbon atoms, a cyclic alkyl group having 3 to 12 carbon atoms, a linear or branched alkenyl group having 2 to 12 carbon atoms, an aralkyl group having 7 to 18 carbon atoms, a linear or branched alkoxy group having 1 to 12 carbon atoms, a linear or branched alkylthio group having 1 to 12 carbon atoms, a saturated or unsaturated heterocyclic group, an aryl group having 6 to 18 carbon atoms, a halogen atom, a nitro group, a cyano group, a mercapto group, a hydroxy group, a formyl group, an acyl group represented by -COR₃₄, an amino group represented by -NR₃₅R₃₆, an acylamino group represented by -NHCOR₃₇, a carbamate group represented by -NHCOOR₃₈, a carboxylic acid ester group represented by -COOR₃₉, an acyloxy group represented by -OCOR₄₀, a carbamoyl group represented by -CONR₄₁R₄₂, a sulfonyl group represented by -SO₂R₄₃, a sulfinyl group represented by -SOR₄₄, a sulfamoyl group represented by -SO₂NR₄₅R₄₆, a sulfonic acid ester group represented by -SO₃R₄₇ or a sulfonamide group represented by -NHSO₂R₄₈ (wherein R₃₄, R₃₇, R₃₈, R₃₉, R₄₀, R₄₃, R₄₄, R₄₇ and R₄₈ each independently represent a hydrocarbon group or a heterocyclic group, and R₃₅, R₃₆, R₄₁, R₄₂, R₄₅ and R₄₆ each independently represent a hydrogen atom, a hydrocarbon group or a heterocyclic group)).

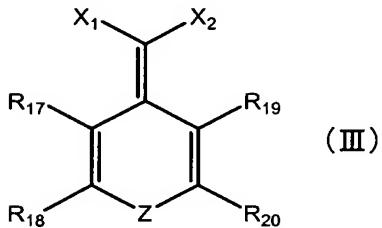

Claim 13 (Original): The optical recording material according to claim 12, wherein the arbitrary anion is a monovalent monodentate ligand.

Claim 14 (Previously Amended): The optical recording material according to ~~any one of claims 1 to 13~~ Claim 1, wherein the metal-complex compound B is a metal-complex compound having a divalent or trivalent transition metal ion.

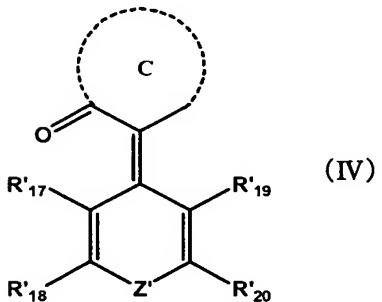

Claim 15 (Original): The optical recording material according to claim 14, wherein the transition metal is at least one selected from the group consisting of nickel, cobalt, copper, iron, zinc, platinum, palladium and manganese.

Claim 16 (Currently Amended): The optical recording material according to ~~any one of claims 1 to 15~~ Claim 1, wherein the organic dye compound A is selected from the compounds represented by the following general formulae (III) and (IV):

[Chem. 3]

[Chem. 4]

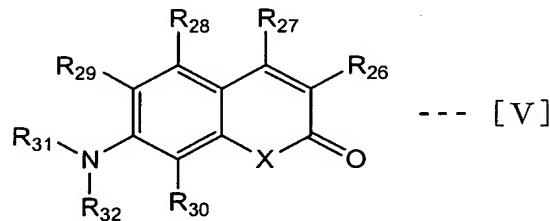

(~~H~~ in the formula (III) or (IV), R₁₇ to R₂₀ and R₁₇' to R₂₀' each independently represent a hydrogen atom or a linear or branched alkyl group having 1 to 12 carbon atoms, a cyclic alkyl group having 3 to 12 carbon atoms, a linear or branched alkenyl group having 2 to 12 carbon atoms, an aralkyl group having 7 to 18 carbon atoms, a linear or branched alkoxy group having 1 to 12 carbon atoms, a linear or branched alkylthio group having 1 to 12 carbon atoms, a saturated or unsaturated heterocyclic group, an aryl group having 6 to 18 carbon atoms, a halogen atom, a nitro group, a cyano group, a mercapto group, a hydroxy group, a formyl group, an acyl group represented by -COR₃₄, an amino group represented by -NR₃₅R₃₆, an acylamino group represented by -NHCOR₃₇, a carbamate group represented by -NHCOOR₃₈, a carboxylic acid ester group represented by -COOR₃₉, an acyloxy group represented by -OCOR₄₀, a carbamoyl group represented by -CONR₄₁R₄₂, a sulfonyl group represented by -SO₂R₄₃, a sulfinyl group represented by -SOR₄₄, a sulfamoyl group represented by -SO₂NR₄₅R₄₆, a sulfonic acid ester group represented by -SO₃R₄₇ and a sulfonamide group represented by -NSO₂R₄₈ (wherein R₃₄, R₃₇, R₃₈, R₃₉, R₄₀, R₄₃, R₄₄, R₄₇ and R₄₈ each independently represent a hydrocarbon group or a heterocyclic group, and R₃₅, R₃₆, R₄₁, R₄₂, R₄₅ and R₄₆ each independently represent a hydrogen atom, a hydrocarbon group or a heterocyclic group, where, R₁₇ and R₁₈, R₁₉ and R₂₀, R₁₇' and R₁₈', R₁₉' and R₂₀' may be condensed with each other to form a hydrocarbon ring or a heterocyclic structure and the hydrocarbon ring and the heterocycles may have substituent), X₁ is an electron-withdrawing group, and X₂ is a hydrogen atom or -Q-Y (Q is a direct bond, an alkylene group having 1 or 2 carbon atoms, an arylene group or a heteroarylene group, and Y is an electron-withdrawing group, and the alkylene group, the arylene group, the heteroarylene group may have arbitrary substituent groups besides Y); ring C is a carbocyclic ketone ring or a heterocyclic ketone ring which may have a substituent group along with C = O; Z and Z' each represent -O-, -S-, -SO₂-, -NR₂₁- [[()]] wherein R₂₁ is a hydrogen atom, a hydrocarbon group

which may be substituted, a heterocyclic group which may be substituted, a cyano group, a hydroxy group[()]], an amino group represented by -NR₂₂R₂₃ (wherein R₂₂ and R₂₃ each independently represent a hydrogen atom, a hydrocarbon group or a heterocyclic group) or an acyl group represented by -COR₂₄ (R₂₄ is a hydrocarbon group or a heterocyclic group) or -COR₂₅ (R₂₅ is a hydrocarbon group or a heterocyclic group)].

Claim 17 (Previously Amended): The optical recording material according to ~~any one of claims 1 to 15~~ Claim 1, wherein the organic dye compound A is the compounds represented by the following general formula (V):

[Chem. 5]

In in the formula (V), X represents -O -, -S -, -NR₃₃-; R₂₆, R₂₇, R₂₈, R₂₉, R₃₀ each independently represent a hydrogen atom or a linear or branched alkyl group having 1 to 12 carbon atoms, a cyclic alkyl group having 3 to 12 carbon atoms, a linear or branched alkenyl group having 2 to 12 carbon atoms, an aralkyl group having 7 to 18 carbon atoms, a linear or branched alkoxy group having 1 to 12 carbon atoms, a linear or branched alkylthio group having 1 to 12 carbon atoms, an aryl group having 6 to 18 carbon atoms, a saturated or unsaturated heterocyclic group, a halogen atom, a nitro group, a cyano group, a mercapto group, a hydroxy group, a formyl group, an acyl group represented by -COR₃₄, an amino group represented by -NR₃₅R₃₆, an acylamino group represented by -NHCOR₃₇, a carbamate group represented by -NHCOOR₃₈, a carboxylic acid ester group represented by -COOR₃₉, an acyloxy group represented by -OCOR₄₀, a carbamoyl group represented by -CONR₄₁R₄₂, a sulfonyl group represented by -SO₂R₄₃, a sulfinyl group represented by -SOR₄₄, a sulfamoyl

group represented by $-\text{SO}_2\text{NR}_{45}\text{R}_{46}$, a sulfonic acid ester group represented by $-\text{SO}_3\text{R}_{47}$ or a sulfonamide group represented by $-\text{NHSO}_2\text{R}_{48}$, R_{31} , R_{32} , R_{33} each independently represent a hydrogen atom, a linear or branched alkyl group, a cyclic alkyl group, an aralkyl group, a linear or branched alkenyl group, an acyl group, two adjacent among R_{26} to R_{33} may be linked to form a saturated hydrocarbon ring or a saturated heterocycle, where, R_{34} , R_{37} , R_{38} , R_{39} , R_{40} , R_{43} , R_{44} , R_{47} and R_{48} each independently represent a hydrocarbon group or a heterocyclic group, and R_{35} , R_{36} , R_{41} , R_{42} , R_{45} and R_{46} each independently represent a hydrogen atom, a hydrocarbon group or a heterocyclic group.)

Claim 18 (Original): The optical recording material according to claim 15, wherein in the above-mentioned general formula (V), X is $-\text{O}-$, $-\text{NR}_{33}-$, and R_{26} , R_{27} , R_{28} , R_{29} , R_{30} each independently represent a hydrogen atom or a linear or branched alkyl group having 1 to 8 carbon atoms, a cyclic alkyl group having 3 to 8 carbon atoms, an aralkyl group having 7 to 12 carbon atoms, a linear or branched alkoxy group having 1 to 8 carbon atoms, a linear or branched alkylthio group having 1 to 8 carbon atoms, an aryl group having 6 to 12 carbon atoms, a saturated or unsaturated heterocyclic monocyclic or bicyclic fused ring group, a halogen atom, a nitro group, a cyano group, a mercapto group, a hydroxy group, a formyl group, an acyl group represented by $-\text{COR}_{34}$, an amino group represented by $-\text{NR}_{35}\text{R}_{36}$, an acylamino group represented by $-\text{NHCOR}_{37}$, a carbamate group represented by $-\text{NHCOOR}_{38}$, a carboxylic acid ester group represented by $-\text{COOR}_{39}$, an acyloxy group represented by $-\text{OCOR}_{40}$, a carbamoyl group represented by $-\text{CONR}_{41}\text{R}_{42}$, or a sulfonamide group represented by $-\text{NHSO}_2\text{R}_{48}$, and R_{31} , R_{32} , R_{33} each independently represent a linear or branched alkyl group having 1 to 12 carbon atoms, a cyclic alkyl group having 3 to 12 carbon atoms or an aralkyl group having 7 to 18 carbon atoms, and one or both of R_{29} and R_{31} and R_{30} and R_{32} may form a saturated hydrocarbon ring or a saturated heterocycle.

Claim 19 (Previously Amended): The optical recording material according to ~~any one of claims 1 to 18~~ Claim 1, wherein the metal-complex compound B inhibits crystallization of the organic dye compound A.

Claim 20 (Previously Amended): The optical recording material according to ~~any one of claims 1 to 19~~ Claim 1, wherein the decomposition starting temperature of the metal-complex compound B is not higher than the decomposition starting temperature of the organic dye compound A.

Claim 21 (Previously Amended): An optical recording medium capable of recording or reading of information, wherein the medium has
a substrate and
a recording layer provided on the substrate and capable of recording or reading of the information by light irradiation, and
the recording layer contains an optical recording material according to ~~any one of claims 1 to 20~~ Claim 1.

Claim 22 (Original): The optical recording medium according to claim 21, wherein the light is a laser beam with a wavelength of 350 nm to 530 nm.
